Allowing Sign-In Using Google

When creating a captive portal network with self sign in, you can allow users to register with their Google social media account.

Before using this task, perform Steps 1 through Step 6 in the *Creating a Network That Uses a Captive Portal with Self Sign In* (GUID-BA9D6CA9-C716-4AAC-B2B8-B0FDF4790CD6.html).

1. The Edit Google App window is displayed.

Edit Google App

Edit Google App [X]

Select Google app to be used for sign in [See example](#)

Client ID *

Client Secret *

You also need to go to your [Google Developer Console](#) and paste the following URI in the app settings under:
Credentials > OAuth 2.0 client IDs > Click on client name > Authorized redirect URIs

<https://devalto.ruckuswireless.com/g/ui/social> [Copy to clipboard](#)

[Cancel](#) [Save](#)

2. In the Client ID and Client Secret fields, you must enter the valid user credentials, and then click Save.
3. (Optional) Click See sample to view an example of the Self Sign In screen.
4. When you have finished viewing the sample screens, click OK.
5. Click Copy to clipboard to copy the displayed URL.
6. Click Google Developer Console.
The Google Cloud window is displayed.
7. In Google Cloud window, click Credentials > (and then) OAuth 2.0 client IDs.
The Client Name is displayed.
8. Click Client Name and in the Authorized redirect URLs field paste the copied URL.
9. Click Save.
